

Knowledge and assessment of a child with ASD (Autism spectrum disorder) requires collecting information:

- Analysis of specialist's documents (if organization gets documents from medicts and other specialists);
- Parental survey: the behavior of a child at home, in a different environment, what a child is interested in, stimulus (questionnaire or interview with parents);
- Child monitoring: establishing a relationship with a child, monitoring activity and behavior, and also discovering improvement (ect. ABC, Educational schedule, Observing card)
- Motivational behavior assessment (ect., DURAND Motivation Assessment Scale).
- Psychoeducational Profile 3 (PEP-3)

Can be made Personalized Educational Plan (PEI).

Successful work with the child will be achieved by knowing his strengths and weaknesses. In further documents you'll find examples and forms to download.
